eviCore healthcare Clinical Decision Support Tool Diagnostic Strategies: This tool addresses common symptoms and symptom complexes. Imaging requests for individuals with atypical symptoms or clinical presentations that are not specifically addressed will require physician review. Consultation with the referring physician, specialist, and/or individual’s Primary Care Physician (PCP) may provide additional insight.

  - SL-1.4.1: Home Portable Monitoring (PM) (Home Sleep Testing) - Coding
  - Page 7
  - SL-1.4.2: Polysomnography (Facility-based-PSG) - Coding
  - Page 9
SL-1.1: General Requirements

- Positive diagnosis of OSA, as measured by valid testing defined as:
  - The apnea-hypopnea index (AH) or respiratory disturbance index (RDI) is ≥15 events per hour with a minimum of 30 events; or
  - The AH or RDI is ≥ to 5 and ≤ 14 events per hour with a minimum of 10 events and documentation of
    - Excessive daytime sleepiness, impaired cognition, mood disorders, or insomnia; or
    - Hypertension, ischemic heart disease, or history or stroke.
    - (See SL-7.2: Practice Notes for additional information)

- A current and comprehensive clinical evaluation (within 60 days) is required before a sleep study can be considered. (Note: The rendering site must be a qualified provider of service per health plan policy.) The clinical evaluation may include a relevant history and physical examination, appropriate laboratory studies, and other relevant diagnostic studies (such as a previous sleep study or overnight pulse oximetry). The results of a sleep questionnaire or sleep questionnaire proxy are required. See: SL-1.2: Sleep Questionnaires.
  - Other meaningful contact (telephone call, electronic mail or messaging) by an established patient can substitute for a face-to-face clinical evaluation
  - Documented history may include the following:
    - Persistent symptoms present for greater than 4 weeks in duration and not associated with respiratory infections.
    - House partners/spouses can describe symptoms, including apneic spells, such as gasping and choking.
    - Co-workers, friends, and/or the patient may report that the patient falls asleep during business meetings, conversations, while stopped at traffic lights, or while driving.
    - Daytime tiredness and excessive caffeine or stimulant use.
    - Excessively loud, erratic and variable snoring. (Note: Snoring alone is not always indicative of OSA).
    - Frequent awakening during the night.
    - Increased movements; sleep talking; displaying confused or erratic behavior during sleep.
    - Morning headaches, limited attention, or memory loss.
    - Drowsy driving or history of car crashes or near miss accidents related to sleepiness.
    - Prior diagnosis of OSA and response to therapy.
  - Documented physical examination should include:
    - Cardiopulmonary evaluation.
    - Level of obesity and/or neck circumference.
    - Other findings, such as: macroglossia, tonsillar hypertrophy, nasal polyps, septal deviation, turbinate hypertrophy, elongated/enlarged uvula, narrow/high arched hard palate retrognathia (recessed mandible) or micrognathia (small mandible).
SL-1.2: Sleep Questionnaires

Three sleep questionnaires (all selfanswered by the patient) are commonly used to quantify the level of sleepiness, quality of sleep or probability of having OSA. These validated questionnaires include (but are not be limited to):

- Epworth Sleepiness Scale;
- Berlin Questionnaire;
- STOP Bang Questionnaire
- Insomnia Severity Index.

eviCore uses the results of these questionnaires to help formulate a patient’s likelihood of having sleep-related disease, so the questionnaires must be appropriate for the specific sleep issue in question (e.g. STOP-BANG and Berlin are most appropriate for OSA evaluation).

- To view these questionnaires and their interpretation in their entirety, see SL-8: Questionnaires.

Results of one of these four questionnaires are required, or the following condition can serve as a proxy for the sleep questionnaire requirement:

- Witnessed apnea by a bed partner.
- Previous diagnosis of OSA, confirmed in record.

SL-1.3: Classifications of Sleep Apnea

Sleep apnea is defined as repetitive partial or complete cessations of breathing that occur during sleep. These breathing events can be caused by a physical obstruction of the upper airway, a lack of effort to breathe, or a combination of these two factors. The source of the sleep disordered breathing determines the type or classification of sleep apnea.

- Obstructive sleep apnea (OSA):
  - OSA is caused by a physical obstruction in the upper airway.
  - Sleep study recording characterized by:
    - Loud snoring.
    - Obstructive apnea events – scored as apneas with apnea index or AI.
    - Hypopnea events – scored with hypopnea index or HI.
    - Significant oxyhemoglobin desaturations.
    - Arousals from sleep.

- Central sleep apnea (CSA):
  - CSA is caused by a reduction or absence of effort to breathe by the diaphragm or respiratory muscles.
  - Sleep study recording characterized by:
    - Central apnea events, or hypopnea events.
    - Occasional snoring.
    - Oxyhemoglobin desaturation.
    - Occasional arousals from sleep.

- Mixed sleep apnea:
  - Mixed sleep apnea is a combination of both OSA and CSA.
- Mixed apnea events generally start with a central apnea component and terminate with efforts to breathe indicative of an obstructive apnea event.

- Cheyne-Stokes Respiration:
  - CSR is a form of periodic breathing characterized by the waxing and waning of respiratory effort and airflow.
  - CSR generally starts with a gradual waning of breathing effort and airflow which results in a central apnea, or hypopnea, followed by a gradual increase in breathing effort and flow.

**SL-1.4: Coding**

**SL-1.4.1: Home Portable Monitoring (PM) (Home Sleep Testing) - Coding**

There are currently 3 levels (G0398, G0399 and G0400) of home PM’s, with varying number of monitored parameters. Each can be used with or without an attendant but are generally performed unattended in the patient’s home.

# SL-2: Indications/Diagnostic Testing

| SL-2.1: Home Sleep Testing (HST) Indications | 11 |
| SL-2.2: In-Laboratory Polysomnography – OSA Indications | 11 |
| SL-2.2.1: In-Laboratory Polysomnography – Other Indications | 13 |
| SL-2.3: In-Laboratory Multiple Sleep Latency Testing (excessive sleepiness) – Indications and Criteria | 14 |
| SL-2.4: Split Night Study or Two Night Study | 14 |
| SL-2.5: Repeat Sleep Testing – (Home or Attended Sleep Studies) | 15 |
| SL-2.5.1: Re-assessment of tx results with known OSA | 15 |
| SL-2.5.2: Re-assessment of suspected narcolepsy or idiopathic | 15 |
SL-2.1: Home Sleep Testing (HST) Indications

- HST can be performed when all of the following three criteria are met:
  - High pre-test probability of moderate-to-severe OSA; and
  - HST can physically be performed, and repeated if necessary; and patient has the mobility, dexterity and cognitive ability to use the available equipment safely at home and the ability to follow instructions; and
  - Does not exhibit one of the co-morbid indications for attended sleep studies found in SL-2.2: In-Laboratory Polysomnography- OSA Indications.

- HST can also be used in follow-up treatment results after:
  - Surgical treatment for moderate to severe OSA, or
  - OSA Oral appliance trial, or
  - Other non-PAP supportive interventions (e.g. positional therapy).

- A follow-up visit to review test results should be performed for all patients undergoing HST

SL-2.2: In-Laboratory Polysomnography- OSA Indications

- PSG (CPT® 95810 or CPT® 95811 with CPT® 95811 preferred) can be considered for the following: Sleep survey or proxy symptom(s) lead to any pretest probability of OSA and one of the following:
  - HST cannot be done due to one of the following reasons:
    - OSA symptoms with low pretest probability of OSA.
    - Patient does not have the mobility, dexterity or cognitive ability to use the available equipment safely at home and the ability to follow instructions.
    - HST has been attempted and is negative, inconclusive, or technically inadequate (report submitted for review).38
  - Documentation of at least one of the following suspected or known co-morbid diagnoses:
    - Morbid obesity (BMI>45, or pulmonary function studies show Obesity Hypoventilation Syndrome, or BMI>35 plus arterial blood gas with PCO2>45, or BMI>35 plus inability to lie flat in bed).
    - Moderate to severe pulmonary disease (for example: COPD, asthma) with nocturnal oxygen use or documented arterial blood gases showing PO2<60 or PCO2>45
    - Documented neuromuscular disease (for example: Parkinson’s, documented stroke or undocumented stroke with residua, active epilepsy, spina bifida, myotonic dystrophy, ALS)
    - Moderate to severe congestive heart failure with documented pulmonary congestion or known left ventricular ejection fraction <45%, or
    - Other critical illness that would prevent them from using the HST equipment.
      - Chronic severe insomnia (by objective measure e.g. sleep diary, validated insomnia questionnaire.38
      - Chronic daily opioid use38 (typically daily high-potency opioids e.g. Methadone®, Suboxone®, Dilaudid®) with stated concern for presence of central sleep apnea.
● Less than 18 years of age.
● Bi-level PAP or Adaptive Servo Ventilation PAP are specifically requested (CPT® 95811 only).
● Documented unsuccessful AutoPAP attempt.
● Central sleep apnea
● “Complex sleep apnea”

♦ Diagnostic Testing pre- and post- hypoglossal nerve stimulator implantation

A hypoglossal nerve stimulator is a surgically implanted device that delivers stimulating electrical pulses to the hypoglossal nerve, which controls upper airway musculature. With a sensing lead, the device permits synchronization with ventilatory effort. The Stimulation Treatment for Apnea Reduction (STAR) trial was a prospective, multicenter trial of 126 participants with a body mass index less than 32, moderate to severe obstructive sleep apnea (AHI 20-50), and difficulty tolerating/adhering to CPAP. Participants, who served as their own control, experienced a significant reduction in Apnea Hypopnea Index with hypoglossal nerve stimulation (68% decrease) and oxygen desaturation index (70% decrease) at 12 months, as well as a reduction in self-reported outcomes at 12 and 24 months. These improvements were maintained at 3 years. During the trial, a response to hypoglossal nerve stimulation was defined as a reduction of AHI by at least 50% from baseline and an AHI of less than 20 events per hour at one year.

♦ Pre-implantation:

- Patients with a high pre-test likelihood for moderate to severe obstructive sleep apnea who have not undergone prior sleep testing should undergo home sleep testing, if appropriate per guidelines, and a PAP trial before consideration of facility testing for possible hypoglossal nerve stimulator implantation.
- Patients who have recently undergone polysomnography, (within 12 months), do not need a repeat study unless there have been changes in weight or symptoms to suggest a clinically significant change in sleep study results.
- In the setting of a known diagnosis of obstructive sleep apnea based on home sleep testing, the following criteria must be met prior to performance of polysomnography for pre-implantation evaluation:
  - BMI <= 32, AND
  - AHI or REI less than 65 on home sleep testing, AND
  - Intolerance to CPAP and/or bi-level PAP during a minimum of one month trial.

♦ Post-implantation:

- As per the clinical trial, polysomnography can be performed at approximately one month post-implantation for the purpose of titrating device parameters and determining therapeutic stimulation settings.
- Following the titration study at one month, retesting (either HST or PSG CPT® 95810) can be performed if any of the following occurs:
  - Clinical response is insufficient despite regular treatment with hypoglossal nerve stimulator.
Sleep Apnea: Diagnosis and Treatment

- Substantial weight gain with return of symptoms.
- Results of previously medically necessary sleep test were inadequate due to limited sleep time or other variables.
  - Note: Following the titration study at one month, the choice of home sleep apnea testing or facility polysomnography for repeat testing will be based on indications and co-morbidities outlined in **SL-2.2.1: In-Laboratory Polysomnography - Other Indications**.

**SL-2.2.1: In-Laboratory Polysomnography - Other Indications**

- Suspected narcolepsy or idiopathic hypersomnia, as evidenced by.\(^{18,19}\)
  - Excessive sleepiness (shown not due to other more common sleep disorders), AND
  - Recurrent daytime naps or lapses into sleep daily for at least 3 months.
  - Additional symptoms may include:
    - Cataplexy- sudden loss of muscle tone occurring in association with intense emotion (laughing or crying), OR
    - Sleep paralysis, hypnagogic hallucinations, hypnopompic hallucinations, automatic behaviors, or disrupted major sleep episode,
  - Previous sleep study results (and history) consistent with possible idiopathic hypersomnia.
  - Persistent symptomatic congestive heart failure (CHF), despite adequate medical treatment, and regardless of pre-test probability of OSA.
  - More complicated parasomnias, **NOT including** more common conditions such as:
    - Typical disorders of arousal.
    - Nightmares.
    - Enuresis.
    - Somniloquy.
    - Bruxism.
  - Rapid Eye Movement (REM) Behavior Disorder: Characterized by the acting out of dreams that are vivid, intense, and violent. Purposeful dream-enacting behaviors include talking, yelling, punching, kicking, sitting, jumping from bed, arm flailing, and grabbing. Also called “acting out of dreams.”
  - Periodic limb movement disorder (PLMD), but **NOT Restless Leg Syndrome (RLS)**. Suspected PLMD is defined by periodic episodes of repetitive limb movements during sleep not caused by another sleep disorder (such as OSA), while RLS is a subjective uncomfortable sensation experienced while awake.

**Practice note**

Occupational requirements (e.g., Department of Transportation [DOT], Federal Aviation Administration [FAA]) to date do not specify home vs. facility testing for initial evaluation. Indications for sleep studies should also be based on these guideline criteria.

Preoperative bariatric surgery testing should also be based on these guidelines criteria.
SL-2.3: In-Laboratory Multiple Sleep Latency Testing (excessive sleepiness) Indications and Criteria

Multiple Sleep Latency Testing (MSLT, CPT® 95805) can be considered for the following:

- Suspected narcolepsy or idiopathic hypersomnia, (see SL 2.2: In-Laboratory Polysomnography- OSA Indications)
- Immediately follows PSG (95810) (cannot follow split-night study)\(^\text{18}\), AND
- Comprehensive Sleep Evaluation including ESS or Berlin performed, AND
- If OSA is suspected, diagnostic study has been performed, and if OSA is present, therapy is initiated, and has resolved symptoms of increased airway resistance (e.g. eliminated snoring).
- Is not requested to assess efficacy of PAP therapy for OSA.

SL-2.4: Split Night Study or Two Night Study

Split Night Study

- Split night study (CPT® 95811) is a PSG + PAP trial, and it can be completed if:
  - Apnea Hypopnea Index (AHI) is greater than 15/hr for \(\geq 2\) hours of testing; \(\text{and}\)
  - \(\geq 3\) hours of sleep time remaining for PAP titration.
- CPT® 95811 can be achieved in the majority of cases in one night and is the current standard approach. This is the approach required for CPAP coverage by the Centers for Medicare and Medicaid Services (CMS).
**Two Night Study**

- However, in some cases it must be done in two nights (CPT® 95810). When the above AHI and 3 hour criteria are not met, the first night’s study (CPT® 95810) is followed by second night PAP.

- PAP titration (CPT® 95811) is subsequently requested after a completed PSG or PM. The same indications that were used to consider PSG or HST (See **SL-2.2**), along with any new information from the PSG or PM, should be used to consider unattended APAP or attended CPAP titration.

For more information on the technical and policy requirements of PSG, as well as on PSG scoring, see Practice Notes **SL-7: Practice Notes**

**SL-2.5: Repeat Sleep Testing - (Home or Attended Sleep Studies)**

**SL-2.5.1: Re-assessment of tx results with known OSA**

- Re-assessment of treatment results (PAP) for a patient with known OSA can be performed when any of the following has occurred (either: HST, PSG-CPT® 95811, PAP, or APAP based on indications and co-morbidities found in **SL-2.4: Split Night Study or Two Night Study**):
  - Substantial weight gain (10% of body weight) with return of symptoms. BMI falls below 30 and there is either intolerance of PAP pressure or a desire to discontinue PAP therapy.
  - Clinical response is insufficient despite treatment.
  - Symptoms return despite a good initial response to CPAP.
  - PAP machine download with AHI> 5/hr with return of symptoms or > 15/hr with or without return of symptoms.
  - **NOT** to assess for the continued presence of OSA, or for the efficacy of PAP therapy in the absence of recurrent or changed symptoms.
  - **NOT** to supply new PAP equipment.
  - Must demonstrate that recurrent or continued symptoms are not due to insufficient compliance (must be using PAP > 70% of nights, 4+hrs/night with continued symptoms).
  - Results of previous medically necessary sleep test were inadequate and not diagnostic due to limited sleep time or other specified variables.

**SL-2.5.2: Re-assessment of suspected narcolepsy or idiopathic**

- Reassessment of suspected narcolepsy or idiopathic hypersomnolence with a repeat CPT® 95810/CPT® 95805 can be considered if previous testing did not confirm the diagnosis but clinical suspicion is still present despite treatment or due to a change in symptoms (e.g. development of sleep paralysis, cataplexy, hypnagogic hallucinations or worsening hypersomnolence).
  - If the patient also has OSA, CPT® 95811 is supported instead of CPT® 95810 as the patient must be on PAP therapy prior to MSLT.

**Note**

Result of previous studies should be submitted for review prior to authorization of additional studies.

<td>SL-4.3.4: Miscellaneous positive airway pressure supplies</td>
</tr>
</tbody>
</table>
SL-4.1: General Requirements

- A positive diagnosis of OSA, as measured by HST or PSG when:
  - The apnea-hypopnea index (AH1) or respiratory disturbance index (RDI) is ≥ 15 events per hour with a minimum of 30 events, OR
  - The AH1/RDI is ≥ 5 and ≤ 14 events per hour with a minimum of 10 events and documentation of:
    - Excessive daytime sleepiness, impaired cognition, mood disorders, or insomnia, OR
    - Hypertension, ischemic heart disease, or history of stroke.

- Results from the sleep study are used to determine the type of sleep apnea, the severity of the breathing disorder, and the most appropriate form of treatment. Depending on these factors, a variety of PAP devices, and location of titration of therapy, can be considered.

- Positive airway pressure is the treatment of choice for the various forms of sleep apnea. Positive airway pressure (PAP) is produced by a flow generator and applied to the airway through nasal, oral, or oronasal mask interfaces.

| CPAP initiation and management (code is used to report the initiation and instruction when a patient begins therapy) | CPT® 94660 |

SL 4.1.2: Current Practice Recommendations for CSA with CHF

- CPAP: Standard
- BiPAP (including ST): Option if CPAP ineffective
- ASV:
  - OPTION if EF > 45% or mild sleep disordered breathing;
  - STANDARD AGAINST if EF < 45% with moderate/severe sleep disordered breathing.35

SL 4.1.3: Treatment of Opioid-Induced Sleep Disordered Breathing

- CSAS associated with drug or substance use: There is currently no evidence to support routine use of facility-based diagnostic sleep testing due to concurrent opioid or other substance use in the absence of clinical history or previous diagnostic testing suggesting or confirming the presence of sleep disordered breathing. Recent studies suggest “medium increased risk” for central apnea in long-term opioid users, but further investigation is recommended. If diagnostic testing is indicated, home sleep testing is not supported for evaluation of chronic opioid users38 (see SL-2.2.1: In-Laboratory Polysomnography- Other Indications). With respect to treatment, current literature is “markedly limited” and further studies are clearly needed to conclusively determine if CPAP is less effective than BiPAP or ASV, although recent studies suggest ASV may be effective in treatment-resistant patients.36, 37

SL-4.2: Positive Airway Pressure Devices

SL-4.2.1: Auto-titration of positive airway pressure in unattended setting

- Initial E0601 APAP Titration can be considered for the following (ALL):
  - A face-to-face clinical evaluation by the treating physician following the diagnostic study and prior to the titration and
  - A positive diagnosis of OSA, as measured by HST or PSG when:
The apnea-hypopnea index (AHI)/RDI is ≥15 events per hour with a minimum of 30 events, OR
The AHI/RDI is ≥ 5 and ≤14 events per hour with a minimum of 10 events and documentation of:
- Excessive daytime sleepiness, impaired cognition, mood disorders, or insomnia, OR
- Hypertension, ischemic heart disease, or history of stroke, and

Rendering site is a qualified provider of service per health plan policy

Repeat E0601 APAP Titration (includes re-titration following initial CPT® 95811 when uncomplicated) can be considered for the following (ALL):
- A positive diagnosis of OSA, as measured by HST or PSG when:
  - The AHI/RDI is ≥15 events per hour with a minimum of 30 events, OR
  - The AHI/RDI is ≥ 5 and ≤14 events per hour with a minimum of 10 events and documentation of:
    - Excessive daytime sleepiness, impaired cognition, mood disorders, or insomnia, OR
    - Hypertension, ischemic heart disease, or history of stroke.
- Attempted compliance with preexisting or existing therapy (70% of nights, 4+ hours/night) has not adequately treated signs and symptoms.
- Persistent symptoms or unimproved AHI/RDI in individual currently on APAP/CPAP therapy, when the patient and/or their caregiver has received the following from the treating physician or supplier of the PAP device:
  - Instruction in the proper use and care of the equipment, and
  - Mask re-fitting or adjustment if necessary, and
  - Education for proper use of PAP accessories, AND
- Rendering site is a qualified provider of service per health plan policy

**SL-4.2.2: Continuous Positive Airway Pressure therapy**

Initiation of E0601 PAP Therapy and establishing compliance (All of the following):
- A positive diagnosis of OSA, as measured by HST or PSG when:
  - The AHI/RDI is ≥15 events per hour with a minimum of 30 events, OR
  - The AHI/RDI is ≥ 5 and ≤14 events per hour with a minimum of 10 events and documentation of:
    - Excessive daytime sleepiness, impaired cognition, mood disorders, or insomnia, OR
    - Hypertension, ischemic heart disease, or history of stroke
- The patient and/or their caregiver have received instruction from the treating physician and supplier of the CPAP device and accessories in the proper use and care of the equipment
- A compliance support plan between the treating physician and DME supplier has been established, AND
- Rendering site is a qualified provider of service per health plan policy

Authorization for equipment purchase (All of the following):
- Resolution of symptoms and improved AHI during initiation period, AND
Device must be consistently used (70% of nights) for an average of four hours or more per 24 hour period, during a consecutive 30 day period during the first 3 months of usage, AND
Re-evaluation of symptoms during days 31-90\textsuperscript{21}
Rendering site is a qualified provider of service per health plan policy

Extension of establishing compliance with E0601 (All of the following):
- Failure to resolve symptoms or unimproved AHI during initial compliance period\textsuperscript{22}, AND
- Inconsistent usage of device related to improper fit, lack of education, intolerance of PAP therapy, or device malfunction, AND
- Patient has received from the ordering physician or supplier of the PAP device in the past 30 days:
  - Instruction in the proper use and care of the equipment, AND
  - Mask refitting or adjustment if necessary, AND
  - Education for proper use of PAP accessories, AND
- Rendering site is a qualified provider of service per health plan policy

Replacement APAP/CPAP E0601 device (All of the following):
- Continued resolution of symptoms and improved AHI on therapy, AND
- Device consistently used for an average of four hours or more per 24 hr period, 70% of nights, AND
- Device is not operating AND
- DME supplier has physically evaluated the device and determined that it is unable to be repaired, AND
- Device to be replaced is no longer covered under a warranty, AND
- Rendering site is a qualified provider of service per health plan policy

**SL-4.2.3: Bi-level Positive Airway Pressure – spontaneous mode**

Initiation of E0470 PAP Therapy and establishing compliance (ALL):
- One of the following medical conditions must be documented in the patient’s record:
  - Neuromuscular disease or restrictive thoracic disorder:
    - Neuromuscular disease (e.g. amyotrophic lateral sclerosis) or a severe thoracic cage abnormality (e.g. severe kyphoscoliosis, post-thoracoplasty TB), AND
    - One of the following:
      - An arterial blood gas PaCO\textsubscript{2}, done while awake and breathing the patient’s prescribed FiO\textsubscript{2}, is $\geq 45$ mm Hg, or
      - Sleep oximetry demonstrates oxygen saturation $\leq 88\%$ for $\geq 5$ minutes of nocturnal recording time (minimum recording time of 2 hours), done while breathing the patient’s prescribed FiO\textsubscript{2}, or
      - Neuromuscular disease only:
        - Maximal inspiratory pressure is $< 60$cm H\textsubscript{2}O, or
        - Forced vital capacity is $< 50\%$ predicted, or
        - Symptomatic respiratory disease impairing activities of daily living, OR
- Severe COPD:
  - An arterial blood gas PaCO₂ is ≥ 52 mm Hg done while awake and breathing the patient’s prescribed FiO₂, or
  - Sleep oximetry demonstrates oxygen saturation ≤ 88% for ≥ 5 minutes of nocturnal recording time (minimum recording time of 2 hours), done while breathing 2 LPM or the patient’s prescribed FiO₂ (whichever is higher), and
  - OSA and treatment with CPAP has been considered and ruled out, OR
- Central sleep apnea or complex sleep apnea diagnosis when:
  - Objective information documents the following:
    - Diagnosis of central sleep apnea or complex sleep apnea, and
    - Central hypopnea/apneas are ≥ 50% of total, or
    - Central apnea index ≥ 5 per hour.
  - Significant improvement of the sleep-associated hypoventilation with the use of an E0470 device on the settings that will be prescribed for initial use at home, while breathing the patient’s prescribed FiO₂, OR
- Obstructive sleep apnea when:
  - Diagnosis of OSA has been established with AHI/RDI ≥ 15, or ≥ 5 and ≤14 with excessive sleepiness, impaired cognition, insomnia, stroke, ischemic heart disease or hypertension, and
  - CPAP (E0601) has been tried and proven either ineffective or not tolerated, based on a therapeutic trial conducted in either a facility or a home setting, OR
- Obesity-hypoventilation syndrome during sleep:
  - ≤ 88% for ≥ 5 minutes of nocturnal recording time (minimum recording time of 2 hours), and
  - Occurs in the absence of obstructive events, and
  - Patient has BMI > 30 kg/m²
- Other sleep-related hypoventilation syndrome:
  - A facility-based PSG demonstrates an increase in PaCO₂ (or surrogate PCO₂) during sleep to a value > 55 mm Hg for > 10 minutes, OR
  - A facility-based PSG demonstrates a > 10 mm Hg increase in PaCO₂ (or surrogate PCO₂) during sleep to a value > 50 mm Hg for > 10 minutes

- Rendering site is a qualified provider of service per health plan policy.

- Continued E0470 therapy after initial 3 months (All of the following):
  - Re-evaluation of symptoms during days 61 – 90, AND
  - Device must be consistently used (70% of nights) for an average of four hours or more per 24 hour period, during a consecutive 30 day period during the first 3 months of usage, AND
  - Resolution of symptoms; AND
  - Rendering site is a qualified provider of service per health plan policy.

- Replacement Bi-level PAP E0470 device (All of the following):
  - Continued resolution of symptoms and improved AHI/RDI on therapy; AND
  - Device consistently used for an average of four hours or more per 24 hour period, 70% of nights, AND
✓ Device is not operating, AND
✓ DME supplier has physically evaluated the device and determined that it is unable to be repaired, AND
✓ Device to be replaced is no longer covered under a warranty; AND
✓ Rendering site is a qualified provider of service per health plan policy.

**SL-4.2.4: Bi-level Positive Airway Pressure – spontaneous/timed mode**

- Initiation of E0471 PAP Therapy and establishing compliance (ALL):
  - One of the following medical conditions must be documented in the patient’s record:
    - Neuromuscular disease or restrictive thoracic disorder:
      - Neuromuscular disease (e.g. amyotrophic lateral sclerosis) or a severe thoracic cage abnormality (e.g. severe kyphoscoliosis, post-thoracoplasty TB), AND
      - One of the following:
        - An arterial blood gas PaCO₂, done while awake and breathing the patient’s prescribed FiO₂, is ≥ 45 mm Hg, or
        - Sleep oximetry demonstrates oxygen saturation ≤ 88% for ≥ 5 minutes of nocturnal recording time (minimum recording time of 2 hours), done while breathing the patient’s prescribed FiO₂, or
        - Neuromuscular disease only:
          - Maximal inspiratory pressure is < 60cm H₂O, or
          - Forced vital capacity is < 50% predicted, OR
    - Severe COPD:
      - PaCO₂ is ≥ 7mm Hg compared to the initial blood gas taken while awake and breathing prescribed FiO₂, and
      - A facility-based PSG demonstrates oxygen saturation of < 88% for ≥5 minutes of nocturnal recording time (minimum recording time of 2 hours) that is not caused by obstructive upper airway events (AHI< 5)
        - (See above for coverage of E0470 for OSA), OR
      - An arterial blood gas PaCO₂ done while awake and breathing the patient’s prescribed FiO₂ is ≥ 52 mm Hg, and
      - Sleep oximetry while breathing with the E0470 device, demonstrates oxygen saturation ≤ 88% for ≥ 5 minutes of nocturnal recording time (minimum recording time of 2 hours), done while breathing oxygen at 2 LPM or the patient’s prescribed FiO₂ (whichever is higher), OR
    - Central sleep apnea or complex sleep apnea diagnosis when:
      - Objective information documents the following:¹⁹
        - Diagnosis of central sleep apnea or complex sleep apnea:
          - Central hypopnea/apneas are ≥ 50% of total, and
          - Central apnea index ≥ 5 per hour.
        - Significant improvement of the sleep-associated hypoventilation with the use of an E0470 device on the settings that will be prescribed for initial use at home, while breathing the patient’s prescribed FiO₂, OR
    - Other hypoventilation syndrome when:
      - A covered E0470 device is being used, and
• A facility-based PSG demonstrates an increase in PaCO2 (or surrogate PCO2) during sleep to a value > 55 mm Hg for > 10 minutes, OR
• A facility-based PSG demonstrates a > 10 mm Hg increase in PaCO2 (or surrogate PCO2) during sleep to a value > 50 mm Hg for > 10 minutes
  ♦ Rendering site is a qualified provider of service per health plan policy

➢ Continued E0471 therapy after initial 3 months (All of the following):
  ♦ Re-evaluation of symptoms during days 61 – 90, AND
  ♦ Device must be consistently used (70% of nights) for an average of four hours or more per 24 hour period, during a consecutive 30 day period during the first 3 months of usage, AND
  ♦ Resolution of symptoms, AND
  ♦ Rendering site is a qualified provider of service per health plan policy

➢ Replacement Bi-level PAP E0471 device (All of the following):
  ♦ Continued resolution of symptoms and improved AHI/RDI on therapy; AND
  ♦ Device consistently used for an average of four hours or more per 24 hr period, 70% of nights; AND
  ♦ Device is not operating; AND
  ♦ DME supplier has physically evaluated the device and determined that it is unable to be repaired; AND
  ♦ Device to be replaced is no longer covered under a warranty; AND
  ♦ Rendering site is a qualified provider of service per health plan policy.

**SL-4.2.5: Heated (E0562) and non-heated (E0561) humidifier**

➢ Initial set-up (All of the following):
  ♦ When requested by treating physician and PAP device (E0470/471 or E0601) has been approved; AND
  ♦ No previous humidifier has been provided; AND
  ♦ Rendering site is a qualified provider of service per health plan policy.

➢ Replacement Bi-level PAP E0471 device (All of the following):
  ♦ Continued resolution of symptoms and improved AHI on PAP therapy; AND
  ♦ Device consistently used for an average of four hours or more per 24 hr period, 70% of nights; AND
  ♦ Humidifier device is not operating ;AND
  ♦ DME supplier has physically evaluated the device and determined that it is unable to be repaired; AND
  ♦ Device to be replaced is no longer covered under a warranty; AND
  ♦ Rendering site is a qualified provider of service per health plan policy.

**SL-4.2.6: Adaptive Servo Ventilation (ASV) therapy (E0471)**

➢ Initiation of E0471 ASV Therapy and establishing compliance (ALL):
  ♦ One of the following medical conditions must be documented in the patient’s record:
    ▪ Central sleep apnea (including Cheyne-Stokes breathing):
      • Diagnosis of central sleep apnea or complex sleep apnea, **and**
      • Central hypopnea/apneas are ≥ 50% of total, or
• Central apnea index ≥ 5 per hour, and
• Mild CSA, or Moderate or Severe CSA with EF> 45%.

OR

■ Complex Sleep Apnea Syndrome
  • Documented persistent, treatment-emergent central or mixed apnea with application of CPAP
  • Central hypopnea/apneas are ≥ 50% of total, or
  • Central apnea index ≥ 5 per hour, and
  • Failure of prior Bi-level trial (spontaneous or spontaneous/timed)

OR

■ Central Sleep Apnea Syndrome due to opioid or substance use:
  • CPAP has been shown to be ineffective following a reasonable treatment attempt/trial, and
  • Opioid therapy cannot be reduced of discontinued, and
  • Central hypopnea/apneas are ≥ 50% of total, or
  • Central apnea index ≥ 5 per hour.

and

♦ Rendering site is a qualified provider of service per health plan policy

➤ Continued E0471 therapy after initial 3 months (All of the following):
  ♦ Re-evaluation of symptoms during days 61 – 90, and
  ♦ Device must be consistently used (70% of nights) for an average of four hours or more per 24 hr period, during a consecutive 30 day period during the first 3 months of usage, and
  ♦ Resolution of symptoms; and
  ♦ Rendering site is a qualified provider of service per health plan policy.

➤ Replacement ASV E0471 device (All of the following):
  ♦ Continued resolution of symptoms and improved AHI/RDI on therapy; and
  Device consistently used for an average of four hours or more per 24 hr period, 70% of nights, and
  ♦ Device is not operating, and
  ♦ DME supplier has physically evaluated the device and determined that it is unable to be repaired, and
  ♦ Device to be replaced is no longer covered under a warranty, and
  ♦ Rendering site is a qualified provider of service per health plan policy.

**SL-4.2.7: Continuous positive airway pressure ventilation (CPAP), initiation, and management (94660)**

➤ Physician face-to-face service addressing PAP usage:
  ♦ Physician application or adjustment of mask or pressure titration or PAP related service; and
  ♦ Service cannot be adequately provided by a certified or registered respiratory therapist, licensed clinician, or sleep technologist when within scope of practice per state regulations; and
  ♦ Another evaluation and management service is not performed.
SL-4.3: Positive Airway Pressure Treatment Supplies

SL-4.3.1: PAP Masks and parts A7027, A7030, A7034, A7044, A7035, A7036

- Combination oral/nasal mask, used with PAP, each (A7027):
  - Coverage criteria for PAP device is met.
  - Commercial Frequency: 2 per 6 months.
  - Medicare Frequency: 2 per 6 months.
  - No other PAP mask ordered (i.e., A7030, A7034, or A7044).

- Oral cushion used with combination oral/nasal mask, replacement only (A7028):
  - Coverage criteria for PAP device is met.
  - Only compatible with A7027 mask.
  - Frequency: 1 per 6 months

- Nasal pillows used with combination oral/nasal mask, replacement only, pair (A7029):
  - Coverage criteria for PAP device is met.
  - Only compatible with A7027 mask.
  - Frequency: 1 per 6 months

- Full face mask used with PAP, each (A7030):
  - Coverage criteria for PAP device is met.
  - Commercial Frequency: 2 per 6 months.
  - Medicare Frequency: 2 per 6 months.
  - No other PAP mask ordered (i.e., A7027, A7034, or A7044).

- Full face mask interface replacement, each (A7031):
  - Coverage criteria for PAP device is met.
  - Only compatible with A7030 mask.
  - Commercial Frequency: 6 per 6 months.
  - Medicare Frequency: 6 per 6 months.

- Nasal interface (mask or cannula type) used with PAP, each (A7034):
  - Coverage criteria for PAP device is met.
  - Commercial Frequency: 2 per 6 months.
  - Medicare Frequency: 2 per 6 months.
  - No other PAP mask ordered (i.e., A7027, A7030, or A7044).

- Cushion for use on nasal mask interface, replacement only, each (A7032):
  - Coverage criteria for PAP device is met.
  - Only compatible with A7034 mask.
  - Commercial Frequency: 12 per 6 months.
  - Medicare Frequency: 12 per 6 months.

- Nasal pillow for use on nasal cannula type interface, replacement only, pair (A7033):
  - Coverage criteria for PAP device is met.
  - Only compatible with A7034 mask.
  - Commercial Frequency: 12 per 6 months.
  - Medicare Frequency: 12 per 6 months.
Oral interface used with PAP, each (A7044):
- Coverage criteria for PAP device is met.
- Frequency: 1 per 6 months.
- No other PAP mask ordered (i.e., A7027, A7030, or A7034).

Headgear used with PAP, each (A7035):
- Coverage criteria for PAP device is met.
- Frequency: 1 per 6 months.

Chinstrap used with PAP, each (A7036):
- Coverage criteria for PAP device is met.
- Frequency: 1 per 6 months.

**SL-4.3.2: Positive airway pressure tubing (A4604, A7037)**

- Tubing with integrated heating element for use with PAP devices, each (A4604):
  - Coverage criteria for PAP device is met.
  - Commercial Frequency: 2 per 6 months.
  - Medicare Frequency: 2 per 6 months.
  - No other PAP tubing ordered (i.e., A7037).
- Tubing used with PAP devices, each (A7037):
  - Coverage criteria for PAP device is met.
  - Frequency: 1 per 3 months.
  - No other PAP tubing ordered (i.e., A4604).

**SL-4.3.3: Positive airway pressure device filters (A7038, A7039)**

- Filter, disposable, used with PAP devices (A7038):
  - Coverage criteria for PAP device is met.
  - Commercial Frequency: 12 per 6 months.
  - Medicare Frequency: 12 per 6 months.
- Filter, non-disposable, used with PAP devices (A7039):
  - Coverage criteria for PAP device is met.
  - Frequency: 1 per 6 months.

**SL-4.3.4: Miscellaneous positive airway pressure supplies (A7045, A7046)**

- Exhalation port with or without swivel used with accessories for positive airway devices, replacement only (A7045):
  - Coverage criteria for PAP device is met.
  - Frequency: 1 per 6 months.
- Water chamber for humidifier, used with positive airway pressure device, replacement, each (A7046):
  - Coverage criteria for PAP device is met.
  - Frequency: 1 per 6 months.
# SL-5: Sleep Apnea Treatment Program Exclusions

| SL-5.1: Experimental and Investigational | 28 |
| SL-5.2: Durable Medical Equipment Device and Supply Exclusions | 28 |
**SL-5.1: Experimental and Investigational**

- The effectiveness of the following therapies has not been established in the treatment of OSA; these therapies may be considered experimental and investigational:
  - Provent Sleep Apnea Therapy
  - Winx Therapy System/Oral Pressure Therapy

**SL-5.2: Durable Medical Equipment Device and Supply Exclusions**

- CPT® 94799 – Unlisted pulmonary service or procedure
  - Due to the presence of more specific codes, medical necessity for this code cannot be established
- E1399 – Miscellaneous durable medical equipment items, components, and accessories
  - Due to the presence of more specific codes for PAP equipment, medical necessity for this code cannot be established for PAP equipment
<table>
<thead>
<tr>
<th>SL-7: Practice Notes</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>SL-7.1: Occupational Requirements</td>
<td>30</td>
</tr>
</tbody>
</table>
SL-7.1: Occupational Requirements

- The FAA does not give any specific guidance on when testing is required. They recommend Maintenance of Wakefulness Test (evaluates daytime alertness) if there remains any question, as well as, CPT® 95810 or CPT® 95811.

- The US DOT will not qualify a driver with “respiratory dysfunction (including sleep apnea) likely to interfere with ability to control or drive.” Sleep apnea requires a medical examination by (proposed administrative rule) “prefer[ably] Over-night” PSG but “accept[s] Home Sleep Testing as a controversial, new technology.” It is not clear whether sleep apnea will disqualify a driver that already has a license.

SL-7.2: Technical and Policy Requirements of PSG

- The parameters, settings, filters, technical specifications, sleep stage scoring and event scoring should be done in accordance with the AASM Manual for the Scoring of Sleep and Associated Events.

- AHST should, at a minimum, record airflow, respiratory effort, and blood oxygenation. The type of biosensors used to monitor these parameters for in-laboratory PSG are recommended for use in HSTs and include the following:
  - Oronasal thermal sensor and nasal pressure transducer for airflow, apnea and hypopnea; and
  - Oximetry with a high sampling rate and fast averaging time for blood oxygenation; and
  - Ideally, a calibrated or uncalibrated respiratory inductance plethysmography for respiratory effort.

- Apnea-Hypopnea Index (AHI) by HST is the number of apneas + hypopneas / total recording time rather than total sleep time. As a result, HST’s are likely to underestimate the severity of events compared to the Apnea-Hypopnea Index (AHI) by PSG. Due to the known rate of false negative HST, in-laboratory PSG should be performed in cases where HST is technically inadequate or fails to establish the diagnosis of OSA in patients with a high pretest probability.

- The eviCore guidelines recognize that HST can be appropriately performed by Joint Commission (JCAHO) and Medicare IDTF-approved facilities.

- PSG is called Type I monitoring:
  - Consists of minimum of 6 hours of constant monitoring in a controlled facility environment.
  - Involves 7 measurement parameters (3 channels of EEG, 2 channel electrooculography, 2 channels of anterior tibialis EMG, ECG or heart rate, oxygen saturation, airflow monitoring, and measures of sub-mental breathing/respiratory effort).
Facilities also typically record body position (with video) and snoring (via microphone).

Results are reported and calculations of the Apnea-Hypoxia Index (AHI) or Respiratory Disturbance Index (RDI) are performed.

Scoring PSG:

- OSA is confirmed if >15 obstructive events per hour or >5 obstructive events per hour plus clinical symptoms
- Obstructive events include apneas, hypopneas, or respiratory-effort related arousals for calculation of RDI.
- Obstructive events include apneas and hypopneas for calculation of AHI; RDI cannot accurately be calculated by HST due to limited respiratory channels.
- REI is acceptable for reporting sleep disordered breathing by HST.

**Total Epworth Score (add up the points)**
**SL-8.2: The Berlin Questionnaire**

The Berlin Questionnaire is comprised of 3 categories and ten questions. Two or more categories with a positive score indicate high probability of OSA.

<table>
<thead>
<tr>
<th>Patient BMI - ______</th>
<th><strong>Category 2</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>6. How often do you feel tired or fatigued after your sleep</td>

</tbody>
</table>
**Berlin Questionnaire Scoring**

- **Category 1**: Items 1-5
  - Item 1: if ‘Yes’, assign 1 point
  - Item 2: if ‘c’ or ‘d’ is the response, assign 1 point
  - Item 3: if ‘a’ or ‘b’ is the response, assign 1 point
  - Item 4: if ‘a’ is the response, assign 1 point
  - Item 5: if ‘a’ or ‘b’ is the response, assign 2 points
  - Add Points. Category 1 is positive if the total score is 2 or more points.

- **Category 2**: Items 6, 7, 8 (item 9 should be noted separately)
  - Item 6: if ‘a’ or ‘b’ is the response, assign 1 point
  - Item 7: if ‘a’ or ‘b’ is the response, assign 1 point
  - Item 8: if ‘a’ is the response, assign 1 point
  - Add Points. Category 2 is positive if the total score is 2 or more points

- **Category 3**: is positive if the answer to Item 10 is ‘Yes” OR if the BMI of the patient is greater than 30kg/m2.

- **High Risk**: if there are 2 or more Categories where the score is positive
- **Low Risk**: if there is only 1 or no Categories where the score is positive
SL-8.3: STOP Bang

STOP Bang questionnaire has eight yes/no questions. A “yes” answer on three or more questions indicates high probability of OSA.

Snoring
1. Do you snore loudly (louder than talking or loud enough to be heard through closed doors?)

Tired
2. Do you often feel tired, fatigued, or sleepy during daytime?

Observed
3. Has anyone observed you stop breathing during your sleep?

Blood Pressure
4. Do you have or are you being treated for high blood pressure?

BMI
5. BMI higher than 35kg/m2

Age
6. Age over 50 years old?

Neck Circumference
7. Neck circumference greater than 40cm?

Gender
8. Gender male?

- High risk of OSA: answering “yes” to three or more items
- Low risk of OSA: answering “yes” to less than three items
**SL-8.4: Insomnia Severity Index**

The Insomnia Severity Index has seven questions. The seven answers are added up to get a total score. When you have your total score, look at the ‘Guidelines for Scoring/Interpretation’ at the bottom of the Insomnia Severity Index page to see where your sleep difficulty fits. Print out a copy of your completed Insomnia Severity Index to take to your health care provider.

For each question, please **CIRCLE** the number that best describes your answer. [Click here to print the Insomnia Severity Index](#).

Please rate the CURRENT (i.e. LAST 2 WEEKS) SEVERITY of your insomnia problem(s).

<table>
<thead>
<tr>
<th>Insomnia problem</th>
<th>None</th>
<th>Mild</th>
<th>Moderate</th>
<th>Severe</th>
<th>Very severe</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Difficulty falling asleep</td>
<td>0</td>
<td>1</td>
<td>2</td>
<td>3</td>
<td>4</td>
</tr>
<tr>
<td>2. Difficulty staying asleep</td>
<td>0</td>
<td>1</td>
<td>2</td>
<td>3</td>
<td>4</td>
</tr>
<tr>
<td>3. Problem waking up too early</td>
<td>0</td>
<td>1</td>
<td>2</td>
<td>3</td>
<td>4</td>
</tr>
</tbody>
</table>

4. How SATISFIED/DISSATISFIED are you with your CURRENT sleep pattern?

<table>
<thead>
<tr>
<th></th>
<th>Very Satisfied</th>
<th>Satisfied</th>
<th>Moderately Satisfied</th>
<th>Dissatisfied</th>
<th>Very Dissatisfied</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>0</td>
<td>1</td>
<td>2</td>
<td>3</td>
<td>4</td>
</tr>
</tbody>
</table>

5. How NOTICEABLE to others do you think your sleep problem is in terms of impairing the quality of your life?

<table>
<thead>
<tr>
<th></th>
<th>Not at all Noticeable</th>
<th>A Little</th>
<th>Somewhat</th>
<th>Much</th>
<th>Very Much Noticeable</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>0</td>
<td>1</td>
<td>2</td>
<td>3</td>
<td>4</td>
</tr>
</tbody>
</table>

6. How WORRIED/DISTRESSED are you about your current sleep problem?

<table>
<thead>
<tr>
<th></th>
<th>Not at all Worried</th>
<th>A Little</th>
<th>Somewhat</th>
<th>Much</th>
<th>Very Much Worried</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>0</td>
<td>1</td>
<td>2</td>
<td>3</td>
<td>4</td>
</tr>
</tbody>
</table>

7. To what extent do you consider your sleep problem to INTERFERE with your daily functioning (e.g. daytime fatigue, mood, ability to function at work/daily chores, concentration, memory, mood, etc.) CURRENTLY?

<table>
<thead>
<tr>
<th></th>
<th>Not at all Interfering</th>
<th>A Little</th>
<th>Somewhat</th>
<th>Much</th>
<th>Very Much Interfering</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>0</td>
<td>1</td>
<td>2</td>
<td>3</td>
<td>4</td>
</tr>
</tbody>
</table>

**Guidelines for Scoring/Interpretation:**

Add the scores for all seven items (questions 1 + 2 + 3 + 4 + 5 +6 + 7) = ______ your total score.

**Total score categories:**

0-7 = No clinically significant insomnia
8-14 = Sub threshold insomnia
15-21 = Clinical insomnia (moderate severity)
22-28 = Clinical insomnia (severe)
