**Note:** Both the Blue Cross Blue Shield of Michigan and Blue Care Network (BCN) Practitioner Performance Summary dashboards are available on the eviCore provider portal. Providers have separate PPS reporting and UM categories for each network. Select BCBSMI or Blue Care Network in the eviCore provider portal to access your PPS dashboard for each health plan.

**What is the Practitioner Performance Summary?**

The PPS is an online dashboard of reports available for you to compare your practice efficiency with your peers on the Blue Cross and BCN networks. eviCore’s utilization efficiency profiling uses the following measures:

- Average per-visit use of therapeutic interventions
- Average visit utilization over time
- Average visit utilization by diagnostic category

**What claims data is used in my PPS?**

eviCore uses physical therapy claims data for commercial and Medicare Advantage products:

<table>
<thead>
<tr>
<th>Blue Cross claims in PPS</th>
<th>BCN claims in PPS</th>
</tr>
</thead>
<tbody>
<tr>
<td>✓ Medicare Plus Blue&lt;sup&gt;SM&lt;/sup&gt; PPO</td>
<td>✓ BCN HMO (commercial)</td>
</tr>
<tr>
<td>✓ Blue Cross commercial PPO</td>
<td>✓ BCN Advantage</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Blue Cross provider profiling</th>
<th>BCN provider profiling</th>
</tr>
</thead>
<tbody>
<tr>
<td>✓ PTs in outpatient therapy centers and hospitals are profiled based on the Organization NPI.</td>
<td>✓ PTs in outpatient therapy centers and hospitals are profiled based on the Organization NPI.</td>
</tr>
<tr>
<td>✓ Independent PTs are profiled based on their Individual NPI.</td>
<td>✓ Independent PTs are profiled based on their provider group affiliation.</td>
</tr>
<tr>
<td></td>
<td>✓ Physician delivered/supervised physical therapy (MD/DO) practices are profiled based on the physician’s Individual NPI.</td>
</tr>
</tbody>
</table>

**How does eviCore assign my utilization management category?**

eviCore assesses utilization efficiency based on physical therapy visits per episode. eviCore assigns physical therapy practices a utilization management category by comparing visits per episode to the peer group:

<table>
<thead>
<tr>
<th>Blue Cross categories</th>
<th>BCN categories</th>
</tr>
</thead>
<tbody>
<tr>
<td>✓ Category A practices average visits per episode up to 80 percent of the peer average.</td>
<td>✓ Category A practices average visits per episode up to the peer group 50&lt;sup&gt;th&lt;/sup&gt; percentile.</td>
</tr>
<tr>
<td>✓ Category B practices average visits per episode from 80 to 120 percent of the peer average.</td>
<td>✓ Category B practices average visits per episode from the 50&lt;sup&gt;th&lt;/sup&gt; to the 75&lt;sup&gt;th&lt;/sup&gt; percentile</td>
</tr>
<tr>
<td>✓ Category C practices average visits per episode above 120 percent of the peer average.</td>
<td>✓ Category C practices average visits per episode above the 75&lt;sup&gt;th&lt;/sup&gt; percentile.</td>
</tr>
</tbody>
</table>
Physical therapists with fewer than 10 episodes of care in the 12-month reporting period don’t have sufficient claims data for eviCore to make a meaningful comparison to the network average. eviCore places these physical therapists in category B.

**How do I access my PPS dashboard and find out the category eviCore assigned to my practice?**

Access eviCore’s provider portal and select *Practitioner Performance Summary* from the main menu. If you logged in from the eviCore website, you will be prompted to select the health plan (Blue Cross or BCN) and select a provider that you have added to your web user account.

If you logged in from bcbsm.com Provider Secured Services, the PPS dashboards are available for the NPI you selected in web-DENIS. Use the health plan drop-down to select Blue Cross or BCN. Then click the “View PPS” button.

To find out your assigned category, click on the * UM Category* tab in the PPS portal. The portal displays the results of the most recent claims analysis and the key performance benchmark that eviCore used to determine your category.

**How often does eviCore assess providers for a new category?**

eviCore reviews claims data twice each year to assign provider categories. You can access your category in the provider portal at least 30 days prior to the effective date.

<table>
<thead>
<tr>
<th>Blue Cross category changes are effective</th>
<th>BCN category changes are effective</th>
</tr>
</thead>
<tbody>
<tr>
<td>✓ April 1st and October 1st</td>
<td>✓ February 1st and August 1st</td>
</tr>
</tbody>
</table>

**How does my category impact my authorization requirements for physical therapy?**

Your category determines the amount and frequency of clinical information eviCore requires for you to obtain authorization.

For providers in Category B and C, the clinical information requested by eviCore for prior authorization may differ by patient age and condition, and by request type (i.e., initial request, second, or more). Approved visits vary based on each individual patient’s condition, severity and complexity and response to treatment received, once provided. For additional information, refer to the guides available on eviCore’s website:

[https://www.evicore.com/implementation/healthplan/blue-cross-blue-shield/michigan](https://www.evicore.com/implementation/healthplan/blue-cross-blue-shield/michigan)

[evicore.com/healthplan/BCN](http://evicore.com/healthplan/BCN)

eviCore manages providers in Category A with less clinical oversight. Providers in Category A are required to submit limited information about the patient’s condition; once the necessary information is provided, these providers are approved for a block of visits over an extended duration. The Category A provider determines the visits that are medically necessary within the approved time period.

**Note:** When submitting requests, it is important that you select the same rendering site/location that is assigned a utilization management category:
Blue Cross site selection
- PTs in outpatient therapy centers and hospitals: search by the facility’s Organization NPI.
- Independent PTs: search by your Individual NPI.

BCN site selection
- PTs in outpatient therapy centers and hospitals: search by the facility’s Organization NPI.
- Independent PTs: search by the group’s Organization NPI.
- Physicians: search by your Individual NPI.

How does my category impact my authorization requirements for occupational therapy?
If you’re a hospital or an outpatient therapy center that bills both physical and occupational therapy using the same NPI, your category establishes the review requirements for both therapies. Although your category is based only on your physical therapy claims, the clinical review process is consistent for all your therapy patients.
Because eviCore only assesses physical therapy claims, independent occupational therapists aren’t assigned a category. Refer to the guides available on eviCore’s website for information about obtaining prior authorization.

What changes can my practice incorporate to be considered for a different category?
Modifying your practice patterns may help you achieve a category change. Refer to eviCore’s Tips for Improving Treatment Efficiency for opportunities to lower your practice’s average visits per episode.

Note: Accurate ICD coding on your claims is also important so that eviCore can validate when your patients are treated for multiple episodes or have a surgical procedure during their course of care.

Can I request a category reconsideration if I don’t agree with the category that eviCore assigned?
If you believe there are circumstances adversely affecting your utilization data, you may request reconsideration within 14 days of eviCore’s notification. Initiate your reconsideration request in eviCore’s PPS portal.
eviCore will email instructions and time frames for submitting the clinical documents needed to review your request. You’ll be required to provide information to support an adjustment to your visits per episode for the following circumstances:

Outliers
- An outlier is a patient who requires higher intensity and/or duration of services due to medical complexity that affects the member’s response to therapy. Documentation must demonstrate medical necessity for the services provided.
- All outliers must be identified at the time information is submitted.

Additional episodes of care
- A patient had surgery for the involved condition after treatment was started.
- A patient had a significant event, such as stroke, amputation, etc.
- Waxing and waning of symptoms are not considered additional episodes.

All recommendations made by eviCore are sent to BCBSM/BCN for review and approval. Your reconsideration decision is final. If you do not meet the threshold for an improved category, you will remain in your original category for the duration of that categorization.
I didn’t receive a category notice. How do I know my category?

Log in to the eviCore provider portal to view your PPS dashboard and assigned category.

eviCore profiles providers with at least 10 physical therapy treatment episodes in the 12-month reporting period. Physical therapists who aren’t participating in the network, are new to the network, or didn’t have claims in the reporting period aren’t assigned a category.

Can members or ordering physicians get information about a provider’s category?

No. eviCore maintains provider categories in its secure provider portal.

How does the PPS profiling address more complex cases?

Each provider’s visits per episode are risk-adjusted to account for differences in patient age, gender, and condition. eviCore applies an externally validated statistical model to claims data to account for these three factors.

Measuring risk-adjusted visits per episode, or RAVE, allows eviCore to compare providers with different patient populations. Where patient characteristics are shown to increase the number of visits typically used, eviCore adjusts down patients’ actual visits. For example, if a physical therapist with a high number of neuro-rehab patients has a 6.9-visit average, the average may fall to 6.4 visits after eviCore applies the risk adjustment.

What is a patient episode of care?

When determining RAVE, a patient episode of care is all treatment provided to a member for a body part or related body part within a 12-month period.

When the focus of treatment changes from one body part to a distinctly different body part, it counts as two episodes. In this case, eviCore calculates RAVE by splitting the patient’s visits between the two distinct episodes.

**Note:** eviCore uses the primary ICD-10 code billed to determine the focus of treatment for a given visit. When a patient’s focus of treatment changes, you must bill the primary ICD-10 code accordingly for eviCore to accurately calculate your visits per episode.

What is the network average in eviCore’s PPS profiling?

eviCore calculates average utilization separately for each health plan based on the following peer groups:

<table>
<thead>
<tr>
<th>Blue Cross peer groups</th>
<th>BCN peer groups</th>
</tr>
</thead>
<tbody>
<tr>
<td>✓ Independent physical therapists and outpatient physical therapy centers, combined</td>
<td>✓ Independent physical therapists, outpatient physical therapy centers, and hospital outpatient physical therapy providers, combined</td>
</tr>
<tr>
<td>✓ Hospital outpatient physical therapy providers</td>
<td>✓ Physician delivered /supervised physical therapy (MD/DO) practices</td>
</tr>
</tbody>
</table>
Does eviCore adjust for comorbidities?

Comorbidities aren’t an explicit adjustment factor. Comorbidities are randomly distributed across a given population, so it is likely you will have as many or as few patients with comorbidities as the next provider.
