TRANSFORMING
Utilization Management

Utilization Management ensures that healthcare services are provided only when they are medically warranted and meet standards for high quality, cost-effective care.

$1.1 TRILLION

is wasted each year on two types of waste in the healthcare system:

Administrative Waste

Clinical Waste

$700 BILLION

- Inefficient hospital admin
- Inefficient billing procedures
- Inefficient with insurance companies

$445 BILLION

- Poor-quality delivery
- Inefficient care coordination
- Overspending on tests and procedures

Changing Industry

Manual Submissions

Costs of Prior Auth

Our goal is to **transform prior auth** so that it supports the delivery of evidence-based care without adding to the administrative waste that burdens our healthcare system.

To that end, we have launched an automated prior auth solution that streamlines the way providers can submit and track cases. Using technological innovations like data science, machine learning, and natural language processing, coupled with electronic health record integration, we are addressing waste head on.
