

CLINICAL GUIDELINES

CMM-204: Prolotherapy

Version 1.0.2022
Effective August 1, 2022

eviCore healthcare Clinical Decision Support Tool Diagnostic Strategies: This tool addresses common symptoms and symptom complexes. Requests for individuals with atypical symptoms or clinical presentations that are not specifically addressed will require physician review. Consultation with the referring physician, specialist and/or individual's Primary Care Physician (PCP) may provide additional insight.

eviCore's Clinical Review Criteria ("CRC") and related content is made available for the limited uses of: reference; and individual use, only limited to facilitating the determination of medically necessary and appropriate clinical treatment by clinicians for specific delegated patients under their care. The CRC and related content is proprietary information of eviCore, and copyrighted to the full extent of the law. Except as expressly permitted, you may not modify, copy, reproduce, republish, upload, post, transmit, hyperlink to or from, or distribute in any way the CRC, nor may you sell, transfer, distribute, assign, lease, reproduce, or otherwise use the CRC in commerce, in a manner that competes with us or infringes upon our rights, or for any public or commercial endeavor without our prior and express written consent.

Clinical guidelines for medical necessity review of Comprehensive Musculoskeletal Management Services.

Definition

Prolotherapy is defined as an injection or a series of injections designed to strengthen weak or lax ligaments, tendons or joints by injecting various proliferating agents (sclerosing solutions) directly into the proposed damaged or stretched ligaments or tendons or into a joint or its adjacent structures to create scar tissue in an effort to stabilize the joint or tendon. Agents used with prolotherapy have included zinc sulfate, psyllium seed oil, combinations of dextrose, glycerin and phenol, or dextrose alone.

General Guidelines

Evidence in the published peer-reviewed scientific literature evaluating the clinical efficacy of prolotherapy is inconclusive. In addition, prolotherapy may result in serious side effects or complications.

Indications and Non-Indications

Prolotherapy performed for the treatment of musculoskeletal pain and/or instability (e.g., laxity, weakness) is considered **experimental, investigational or unproven (EIU)**.

Procedure (CPT®) Codes

This guideline relates to the CPT® code set below. Codes are displayed for informational purposes only.

Any given code's inclusion on this list does not necessarily indicate prior authorization is required.

CPT®	Codes Considered Experimental, Investigational , or Unproven (EIU)
M0076	Prolotherapy

This list may not be all inclusive and is not intended to be used for coding/billing purposes. The final determination of reimbursement for services is the decision of the health plan and is based on the individual's policy or benefit entitlement structure as well as claims processing rules.
