

Zilretta™ (triamcinolone acetonide extended-release injectable suspension)

When requesting Zilretta (triamcinolone acetonide extended-release injectable suspension), the individual requiring treatment must be diagnosed with an FDA-approved indication and meet the specific coverage guidelines and applicable safety criteria for the covered indication.

FDA-approved Indication

Zilretta is indicated as an intra-articular injection for the management of osteoarthritis pain of the knee.

Coverage Guidelines

Osteoarthritis pain of the knee

The individual must meet **all** of the following criteria for approval:

- Has a diagnosis of osteoarthritis of the knee that has been confirmed by radiologic evidence (e.g., x-ray, magnetic resonance imaging, computed tomography scan, or ultrasound);
- Has not previously received Zilretta injection;
- Has had an inadequate response to previous intra-articular corticosteroid injection.

Approval duration: 1 dose

Recommended Dosing

Administer 32mg as a single intra-articular injection.
