

Atrophic Gastritis (EGD-1.9)

Endoscopic surveillance is indicated in individuals with atrophic gastritis, guided by the OLGA (Operative Link on Gastritis Assessment) staging system. Specifically, individuals with OLGA stage 3 or 4 atrophic gastritis are eligible for endoscopic surveillance every 3 years, with annual surveillance for those who also have a first-degree relative with gastric cancer. Additionally, patients with autoimmune atrophic gastritis are covered for endoscopic surveillance every 3 years. Endoscopic surveillance, as recommended by eviCore Guidelines, aims to improve early detection and prevention of gastric cancer in high-risk populations, in accordance with National Society Guidelines.
