

Home Health Bundles

EviCore has created Home Health Bundles that are real-time approvals for a variety of diagnoses. These bundles include nursing, therapy, social work and aide services. The idea behind these bundles is to allow the home health provider a quick turnaround time to obtain authorization and begin servicing the member as quickly as possible.

Initial bundle covers visits when not sure what is going to be needed initially. This bundle gives the HH provider visits to perform evaluations and develop a plan of care to submit for approval for more visits and services.

There are currently 34 bundles in place that focus on:

Cardiac
Respiratory
Wound care
Orthopedic (total joints)
Amputations
Back pain
Falls/Syncope
Stroke/CVA
Diabetes
Renal
Sepsis
Liver disease
Oncology and chemotherapy
Parkinson's
Dementia/Alzheimer's
GI Bleeds
Post-Op care with hospital admission
General Weakness
Urinary device dependency
Urinary retention
Bladder/Bowel resections
New ostomy care
Metabolic encephalopathy
Bowel surgery aftercare

Bundles are offered based on primary diagnosis for home health services.
